[coreexotics.com](http://coreexotics.com)

Core Exotics is a new innovative specialty exotic produce company and is proud to introduce “Emma’s Touch” a new exciting line of fine exotic vegetables and greens.

Finally a retail line of specialty exotic produce with an excellent shelf life. Emma’s Touch consists of fresh trimmed veggies, petite herbs, and exotic greens. We created this line with the goal of helping the consumer attain that ‘white table cloth’ effect one gets when dining at fine establishments, in their own dining room. So when trying to achieve that special touch for that special occasion “Emma’s Touch” is the solution to your needs. While perfect for those special occasions they are also affordable for everyday use.

### Specialty Veggies

All of our vegetables are trimmed and ready for use. The yield on these is 100%, unlike other vegetables you buy in your local market that must be prepped, resulting in wasted product and time.

### Petite Herbs

Like our vegetables, all of our herbs are trimmed and ready for use. Most herbs you currently buy can be up to 50% stem resulting in a large amount of waste. This has caused the consumer to avoid using fresh herbs, and opting for less flavorful dried herbs. When trying to capture the ‘white table cloth’ effect, flavor and appearance is essential. Emma’s Touch’s fresh petite herbs are very flavorful, yet affordable because of the near 100% yield.

### Exotic Greens

This is a new cutting edge line of tiny greens that are excellent for garnishing those special dinners when you are trying to capture that exclusive image. These colorful and exciting greens also add sensational flavor to those ‘white table cloth’ entrees. These unique tiny greens can be used in preparing dishes such as grilled meats, poultry and seafood, as well as stews, soups and bisques’. They also can be added to any salad. Some of these unique items such as Rose Crystals, can be used as an excellent garnish for desserts, including cakes, custards, and ice cream style desserts as well as exotic cocktails. NOTE: A full line of organic micro greens also available, see website for details.

At Core Exotics, ensuring our products are of the highest quality is one of our top goals. The other most important goal of our company is the safety of our product. We go to great lengths working with our farms to ensure our product is extremely safe for consumption. We follow all of the recommended USDA and FDA guidelines for all aspects of the harvest of our fine exotic vegetables and greens to include pre-harvest and post-harvest. We also contract the services of third party food safety corporations. These companies periodically and regularly conduct preset inspections as well as unannounced spot inspections of our facilities including the actual farm, the processing facility and our chain of distribution.

Please visit our website - [www.coreexotics.com](http://www.coreexotics.com) - for additional information such as our state of the art unique packaging, chefs creations and recipes that the top chefs use at the finest dining establishments all over the world.
